

Why Do You Teach?

[Music]

Teaching is tough. It's challenging but it's also transformative. It's an opportunity for us as teachers to do a lot of great things in the sense of not only building foundational knowledge and literacy and numeracy but also teaching some of the skills that lead to, not even just success, but prosperity.

Critical thinking, curiosity, life-long readership skills, a life-long love for learning, a work ethic; all these wonderful things. I think that Taylor Molly said it best. He said, 'Don't judge a teacher on what they make, because they make a difference.'

I want to get rid of the negative connotation that people have with math. I want to empower my students to do great things in the world.

Science gets a reputation of not being for everyone, and science is for everyone. Science helps us understand the world around us and learning is fun.

I want to teach because I want to inspire and empower the lives of young children.

I teach because it challenges me in addition to my students and my players.

I want to help students learn what they love.

I want to be a teacher because I want to be a role model for the young children and inspire them to do what they love.

I started working with a class and I just instantly fell in love with it. I just loved their energy and I just liked seeing them learn and figure everything out.

To help better the future society, because it has to start somewhere.

I chose teaching because math has always been my favorite subject, and I always loved helping my classmates with it. I also teach horseback riding lessons and I've been doing that for six or seven years now and loved helping people, so I wanted to kind of make a full-time job out of it.
