

# Health Sciences Program

[Music]

The health sciences industry is a massive opportunity for students to find jobs and we need qualified trained professionals at every level to keep the system running smoothly.

Health sciences at Thomas College is an interdisciplinary degree program designed for students who love science and are interested in health care, but perhaps not interested in direct patient care.

Our students will learn about the human body and what it needs to function optimally as well as how and why we might typically get sick. They'll gain that knowledge from foundational courses like anatomy and physiology, nutrition, microbiology, and psychology.

We also want our students to understand the complexities of why maintaining our health can be difficult. So, from courses like public health and disease prevention they will learn about the social determinants of health.

Finally, we want our students to be able to pursue the types of courses that will train them for the part of the healthcare industry that they're interested in. This major includes a diverse list of electives from disciplines such as political science, psychology, education, business, and life sciences.

As a health sciences major at Thomas College, you will enter the workforce prepared to be an advocate for your community and build an accessible, just, and healthy future for us all.
